

LUMINARIOUS

♦ BUILD JOURNAL ♦

The Arca Cognitorium — Living Record of Construction

Wizard:

LordFingers

Build Started:

How to Use This Journal

This journal is a living record. It is not a report — it is a companion to the build. Fill it in as you work, not after. The deviations you record today are the decisions that save you tomorrow. The friction points you name become the Grimoire entries you carry forward.

This journal has three rhythms:

- ◆ Per-phase: Fill in one section per phase before you start and after you complete it.
- ◆ Per-session: Log significant decisions and deviations as they happen — even one line is enough.
- ◆ Per-incident: When something breaks or surprises you, record it in the Incident Log immediately.

◆ *The Assessor will mine this journal. The observations in the Deviation Log become Grimoire candidates. The Friction Points become standing instructions. The journal feeds the machine.*

Environment Record

Complete this once at the start of the build. Revisit if the environment changes significantly.

System

OS / Platform:	Linux Debian 13 (Trixie)/KDE Plasma 6.3.6
Python version:	Python 3.11.9
Textual version:	Textual 8.0.0
OpenAI SDK version:	1.69.0
Editor / IDE:	micro
Terminal:	Konsole

Project Paths

Project root:	/home/lordfingers/ArcaCognitorium
config.yaml path:	/home/lordfingers/ArcaCognitorium/config.yaml
data/ path	/home/lordfingers/ArcaCognitorium/storage/
Virtual env:	/home/lordfingers/ArcaCognitorium/venv-OpenAI

API Configuration

Model — Fast:	Undecided
Model — Smart:	Undecided
API key env var:	OPENAI_API_KEY

Base URL (if custom):

PHASE 1

The Naming Pass

Rename modules. Populate module stubs. Establish lore names throughout.

Pre-Build State

Date started: _____

Git branch: _____

Tests passing at start: _____

What I understand about this phase before starting:

Decisions Made

♦ *Record choices here as you make them — not at the end. One line per decision is enough.*

Decision log — one per line:

Deviations from Spec

The spec is a blueprint, not a contract. Record every place you deviated, why, and whether the deviation is permanent or temporary.

Section	What Spec Said	What I Did Instead	Why / Status

Friction Points

What was harder than expected? What took longer? What confused you? Be specific.

Friction points encountered:

Completion Record

Date completed:

Tests passing at end:

Commit hash:

What I would tell myself before starting this phase:

PHASE 2

Status Visibility

Status layer. Bubble system. Boot sequence. Animations. Conjunction Chamber.

Pre-Build State

Date started:

Git branch:

Tests passing at start:

What I understand about this phase before starting:

Decisions Made

♦ *Record choices here as you make them — not at the end. One line per decision is enough.*

Decision log — one per line:

Deviations from Spec

The spec is a blueprint, not a contract. Record every place you deviated, why, and whether the deviation is permanent or temporary.

Section	What Spec Said	What I Did Instead	Why / Status

Friction Points

What was harder than expected? What took longer? What confused you? Be specific.

Friction points encountered:

Completion Record

Date completed:

Tests passing at end:

Commit hash:

What I would tell myself before starting this phase:

PHASE 3

The Grimoire

Permanent personal memory. /grimoire commands. Context injection.

Pre-Build State

Date started: _____

Git branch: _____

Tests passing at start: _____

What I understand about this phase before starting:

Decisions Made

♦ *Record choices here as you make them — not at the end. One line per decision is enough.*

Decision log — one per line:

Deviations from Spec

The spec is a blueprint, not a contract. Record every place you deviated, why, and whether the deviation is permanent or temporary.

Section	What Spec Said	What I Did Instead	Why / Status

Friction Points

What was harder than expected? What took longer? What confused you? Be specific.

Friction points encountered:

Completion Record

Date completed:

Tests passing at end:

Commit hash:

What I would tell myself before starting this phase:

PHASE 4

The Tome

Per-project knowledge layer. /tome commands. Project lifecycle.

Pre-Build State

Date started:

Git branch:

Tests passing at start:

What I understand about this phase before starting:

Decisions Made

♦ *Record choices here as you make them — not at the end. One line per decision is enough.*

Decision log — one per line:

Deviations from Spec

The spec is a blueprint, not a contract. Record every place you deviated, why, and whether the deviation is permanent or temporary.

What I would tell myself before starting this phase:

Incident Log

When something breaks unexpectedly — a crash, a data corruption, an integration failure — record it here immediately. Do not wait until you have fixed it.

Incident 1

Field	Record
Date / Phase	
Symptom observed	
Root cause	
Fix applied	
Preventable?	

Incident 2

Field	Record
Date / Phase	
Symptom observed	
Root cause	
Fix applied	
Preventable?	

Incident 3

Field	Record
Date / Phase	
Symptom observed	
Root cause	
Fix applied	
Preventable?	

Incident 4

Field	Record
Date / Phase	
Symptom observed	
Root cause	
Fix applied	
Preventable?	

Incident 5

Field	Record
Date / Phase	
Symptom observed	
Root cause	
Fix applied	
Preventable?	

Incident 6

Field	Record
Date / Phase	
Symptom observed	
Root cause	
Fix applied	
Preventable?	

Grimoire Candidates

As you build, you will accumulate hard-won knowledge about how you work, what you need, and what the machine should always know. Record those insights here. They become Grimoire entries once the machine is running.

| ♦ *After Phase 3 is complete, transfer these entries directly via /grimoire add.*

Communication Style

communication_style entries:

Work Patterns

work_patterns entries:

Preferences

preferences entries:

Friction Points

friction_points entries:

Standing Instructions

standing_instructions entries:

Cross-Phase Notes

Things that span multiple phases, architectural insights that emerged during the build, and anything that doesn't fit neatly in a single phase section.

Architecture insights:

Things to revisit after the build is complete:

Ideas for Phase 9 and beyond:

The journal feeds the machine. The machine remembers.
